

# Cyclic changes in Hungarian relative clauses

Julia Bacskai-Atkari<sup>1</sup> and Éva Dékány<sup>2</sup>

<sup>1</sup>University of Potsdam, <sup>2</sup>Institute for Linguistics (HAS)

julia.bacskai-atkari@uni-potsdam.de, dekany.eva@nytud.mta.hu

## 1. Introduction

Old Hungarian (OH): early 9<sup>th</sup>-16<sup>th</sup> century; first coherent text: Funeral Sermon and Prayer from 1192–1195, first codex: Jókai Codex from after 1370 (surviving copy from 1448).

RCs in OH: relative operator formally identical to interrogative operator

- (1) de **qui** legen neký atia oꝝut nem tudiuc  
but who.INT be.SBJV.3SG he.DAT father-POSS that-ACC not know-1PL  
'but we do not know who his father is' (Königsberg Fragment)
- (2) ꝑcuꝝ leannac [**qui** vleben tart chudalatuꝝ fiot]  
virgin girl-DAT who.REL lap-POSS.INE holds wonderful son-ACC  
'of a virgin girl, who is holding a wonderful son in her lap' (Königsberg Fragment)

Modern Hungarian: interrogative operator unchanged, relative operator has an *a*- prefix

- (3) de nem tudjuk, **ki** lehet az atyja  
but not know-1PL who.INT be.POSSIB.3SG the father-POSS  
'but we do not know who his father is'
- (4) szűz leánynak, **aki** öleben tart csodálatos fiút  
virgin girl-DAT who.REL lap-POSS.INE holds wonderful son-ACC  
'of a virgin girl, who is holding a wonderful son in her lap'

origins of relative pronouns cross-linguistically:

*wh*-pronouns → *wh*-REL

demonstrative pronouns → *dem*-REL

the relative cycle (see van ??):

- the reanalysis of demonstrative/interrogative pronouns into relative pronouns
- the reanalysis of relative pronouns into C heads
- the grammaticalization of original operators into C heads allows new relative pronouns to appear in the CP-domain

English (van ??):

- (I) reanalysis of *that* in OE: demonstrative → relative operator → C head
- (II) reanalysis of *wh*-pronouns in ME: interrogative operator → relative operator

(I) precedes (II) → output of (I) provides an environment for (II)

English historically has both dem-REL and wh-REL in relative clauses

- dem-RELS are standard in Germanic relatives (?)
- the dem-REL *that* has been grammaticalized, other dem-RELS obsolete in English relatives
- co-occurrence of wh-RELS with *that*: doubly filled COMP

Main claim: Hungarian displays reanalysis processes similar to (I) and (II), but:

- (II) precedes (I)
- the output of (II) gives only relative operators, not C heads
- hence (I) can produce relative pronouns only if dem-RELS fuse with already existing wh-RELS → complex dem-wh-RELS

Roadmap:

- relative clauses in Old Hungarian
- the appearance of complex relative pronouns in late Old Hungarian
- relative clauses in Modern Hungarian

## 2. The earliest stage

### 2.1. The empirical picture

Relative clauses appear in the first coherent Hungarian texts.

- introduced by relative operators
- operators are formally identical to interrogative operators (wh-operators)

- (6) a. uimagguc fzent peter urot [kinec odut hotolm]  
 pray-SBJV.1PL Saint Peter lord-ACC who-DAT given power  
 'let us pray to the lord Saint Peter, to whom power has been given'  
 (Funeral Sermon and Prayer)

- b. es ana tartia uleb en [qui sciult dychev segut]  
 and mother holds lap-POSS.INE who bore glory-ACC  
 ‘and the mother, who has given birth to glory, is holding him in her lap’  
 (Königsberg Fragment)
- c. eggedum illen maraggun uro dum  
 only.one-POSS.1SG live-SBJV.3SG stay-SBJV.3SG lord-DIM.POSS.1SG  
 [kyth wylag felleyln]  
 who-ACC world fear-SBJV.3SG  
 ‘let my only one live and stay, so that the world shall fear him’  
 (Old Hungarian Lamentations of Mary)

Arguments that these are operators, not complementizers:

- can take plural marking and case marking

- (7) egýebeknek zerzamaual [ky-k-nek myatta ysten mýuelkedyk  
 others-DAT tool-POSS.INSTR who-PL-DAT because.of God cultivates  
 eznek byzon gyewmelczet]  
 this-DAT sure fruit-POSS.ACC  
 ‘with other tools, with which God cultivates its assured fruit’ (Jókai C. 113)

- can take postpositions

- (8) ez levn vy ignec chudaia [qui mia vrduguc  
 this became.3SG new case-DAT miracle-POSS who because.of devils  
 scurnevlenec]  
 wondered-3PL  
 ‘this was the miracle of the new event, due to which the devils were surprised’  
 (Königsberg Fragment)

## 2.2. Analysis

Left periphery of clauses based on ??:

- (9) FORCE (TOP\*) INT (TOP\*) FOC (TOP\*) FIN IP

Adopted here as:

- (10) CP(1) (TOP\*) INT (TOP\*) FOC (TOP\*) CP(2) IP

NB: topics in Hungarian are generally lower than CP2.

Proposal: OH relative operators are in spec, CP2 because

- they can be preceded by high topics

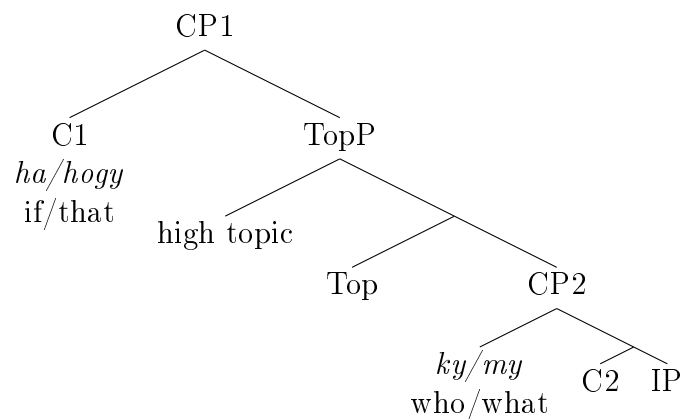

- (11) a. olý zerelmeth, [zornýw halaal kyth nem goyozoth]  
 such love-ACC terrible death who-ACC not defeated.3SG  
 ‘such love that was not defeated by death’ (Czech C. 62)

- b. yvta Angenek nag hegeyre, [Cicilianak balya felol  
reached Ange-DAT great mountains-SUB Cilicia-DAT left-POSS from  
**melyek** vadnak]  
which-PL are.3PL  
'he came to the great mountains of Ange, which are on the left of  
Cilicia' (Székelyudvarhely C. 4)
- c. [fent Adoryaf Nappyahoz kezelb **ky** vafar Nap ezük] az  
Saint Adrian day-POSS.ALL closer who Sunday falls that  
lezen Advent vafarnapya  
will.be advent Sunday-POSS  
'that will be Advent's Sunday, the Sunday which is closer to Saint  
Adrian's day' (unnamed codex fragment)

- they can be preceded by the C1 complementizers *hogy* and *ha* (see also ?, though this is less frequent than C-less sentences)

- (12) tyzen keth themen angyalth [**hogy kyk** engem megh  
twelve legion angel-ACC that who-PL I.ACC PRT  
oltalmaznanak]  
protect-COND.3PL  
'twelve legions of angels, who would protect me' (Apor C. 209)

- (13) a. [**ha kyket** erewsb en zerettem] azoktol hamaraban meg  
if who-PL.ACC stronger I loved.1SG those-ABL sooner PRT  
vtaltattam  
was.hated-1SG  
'those whom I loved more started to hate me sooner' (Jókai C. 154)
- b. [**ha mit** kerendetec at'atol èn nèuembè] azt  
if what-ACC ask-2PL father-ABL I name-POSS.ILL that-ACC  
tèzèm  
do-1SG  
'I will do what you ask from the Father in my name' (Munich C. 101ra)

### 2.3. Against an alternative analysis

?’s (2014) observation: only one example where something intervenes between *hogy* ‘that’ and *ki/mi* ‘who/what’ (though several examples where something intervenes between *ha* ‘if’ and *ki/mi* ‘who/what’).

Her alternative analysis: RCs beginning with *hogy ki* ‘that who’ and *hogy mi* ‘that what’ feature a monomorphemic complementizer *hogyki* and *hogymi*.

(14)

NB: Dömötör is a descriptive grammarian, (14) is a translation of her analysis into the generative framework.

Rebuttal 1:

- RCs with overt Cs are much less frequent than those with covert Cs
- topicalization in Hungarian typically targets a position below the CP-domain
- high topicalization into the CP-domain in RCs with overt Cs is rare

Rebuttal 2:

- the operators *ki* ‘who’ and *mi* ‘what’ may bear plural marking and case marking even after *hogy*

- (15) a. tyzen keth themen angyalth [hogy ky-k engem megh  
 twelve legion angel-ACC that who-PL I.ACC PRT  
 oltalmaznanak]  
 protect-COND.3PL  
 ‘twelve legions of angels, who would protect me’ (Apor C. 209)
- b. olÿaat tezők raÿtad [hog ky-tol felz]  
 such-ACC do-1SG you.SUP that who-ABL fear-2SG  
 ‘I will do such a thing to you that you are afraid of’ (Sándor C. 14v)

- these examples definitely feature a C *hogy* and an operator *ki/mi* ‘who/what’

## 3. The rise of the morphologically complex operator

### 3.1. Stage 1: the starting point

The demonstrative in the main clause and the RC can be string-adjacent. At the starting point the demonstrative is still in the main clause and receives case from the main clause (the operator receives case from the embedded clause)

- (16) *Nag' bolondsag embernek zeretnye azt, kinek miatta ...*  
 great foolishness human-DAT love-INF.3SG DEM-ACC who-DAT because.of  
 'it is very foolish for humans to love the one for whom' (Bod C. 2v)

The reanalysis starts in a subset of the above cases: where the demonstrative is morphologically unmarked

- (17) a. *Ez az [ky cristust keresztfan tarsolkodtatt] Ez az [ky cristusual coporsoba el reytetyk]*  
 this DEM who Christ-ACC cross-SUP conversed.3SG this DEM who  
 Christ-INSTR coffin-ILL off is.hidden  
 'this is the one who talked to Christ on the Cross; this is the one who is put into the coffin with Christ' (Jókai C. 133)
- b. *o az [ki en vtannam iouedo]*  
 he DEM who I after.me is.to.come  
 'he is the one who comes after me' (Munich C. 85 va)

### 3.2. Stage 2: syntactic change

The demonstrative is reanalyzed as part of the RC. It now receives case from the RC.

- (18) matrix case: ACC, RC case: NOM
- a. *veged [az mi thyed]*  
 take-IMP.2SG DEM what yours  
 'take what is yours' (Gl., around 1456)
- b. *es laang meg egethe [az kyk bynesek valanak]*  
 and flame PRT burned.3SG DEM who-PL guilty-PL were-3PL  
 'and those who were guilty were burned by flame' (Kulcsár C. 261)

NB: demonstratives used in nominal positions bear appropriate number and case marking, adnominal demonstratives are bare.

- (19) **az-ok-ot** agyad zegeneknek  
 DEM-PL-ACC give-IMP.2SG poor-PL.DAT  
 'give those to the poor' (Jókai C. 98) demonstrative in a nominal position
- (20) **az** bewn-ek-rewl kyket tewtem  
 DEM sin-PL-ALL who-PL.ACC did-1SG  
 'about the sins that I did' (Jókai C. 25) adnominal demonstrative

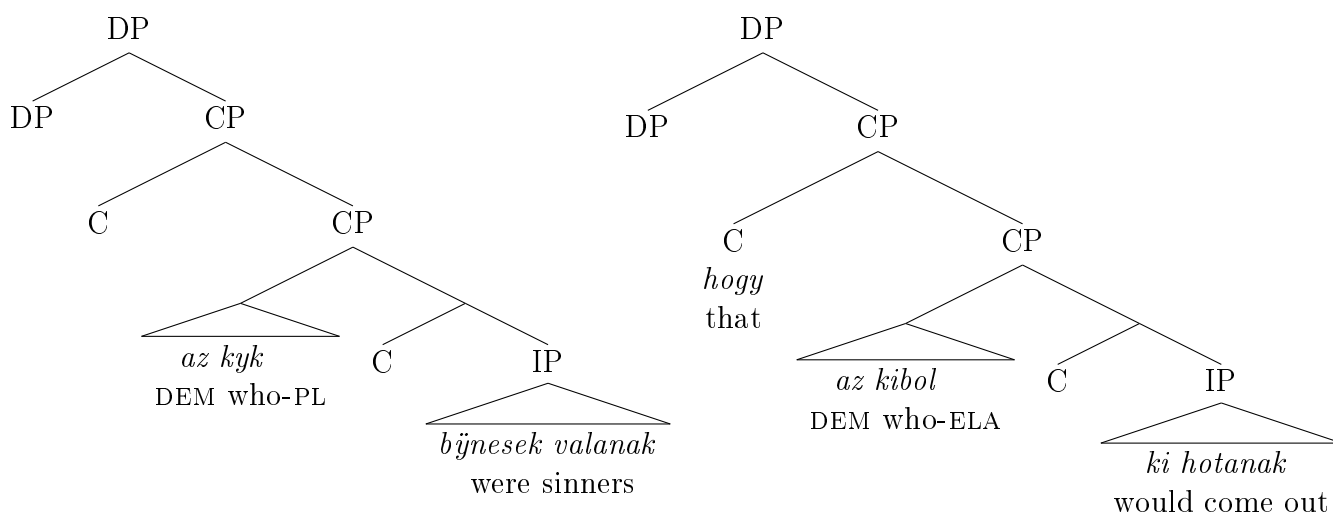

Demonstratives reanalyzed into the RC are bare:

- (21) es laang meg egethe [az kyk bñnesek valanak]  
 and flame PRT burned.3SG DEM who-PL guilty-PL were-3PL  
 ‘and those who were guilty were burned by flame’ (Kulcsár C. 261)

→ the reanalyzed demonstrative forms a constituent with the wh-REL operator  
 Where is the *az*+relative operator complex? It can be preceded by higher C complementizer → in the spec of the lower CP

- (22) egi nehani Caput peczetelnek be [hog az kibol ki hotanak]  
 a few gate-ACC seal-3PL in that DEM who-ELA out come-3PL  
 ‘they seal a few gates from which they would come out’

NB: (22) is a unique example in the linguistic records, see below why

the demonstrative is renewed in the main clause (possibly has different case from the *az*+relative operator constituent):

- (23) a. kellemetes nekem Ferencz az [amit mondaz]  
 pleasant for.me Francis that DEM-what-ACC say-2SG  
 ‘it is pleasant for me, Francis, what you are saying’ (Virginia C. 84)  
 b. myre zeressem ezt azt [azky keserew vegezetewt  
 what-SUB love-SBJV-1SG I that-ACC DEM-who bitter end-ACC  
 yger]  
 promise.3SG  
 ‘why should I love that who promises a bitter end?’ (Book of Proverbs 74)

- loss of the consonant

(26) a<sup>z</sup>t [a mel' alab valo]  
 that-ACC DEM which pityful  
 'that which is more pityful' (Munich C. 86rb)

- loss of the consonant + loss of space in orthography

(27) Mert [aki ezic], vrnac ezic, Es [aki nem  
 because DEM-who eat-3SG Lord-DAT eat-3SG and DEM-who not  
 ezic], vrnac nem ezic  
 eat-3SG Lord-DAT not eat-3SG  
 'because those who eat eat for the Lord, and those who do not eat do not  
 eat for the Lord' (Vitkovics C. 54)

These strategies co-existed for a long time; in Modern Hungarian only the last one survives.

## 4. Modern Hungarian

### 4.1. Standard Modern Hungarian

Due to structural economy, the higher CP layer is not generated for marking subordination (dem-wh-REs are unambiguously associated with embedded clauses)

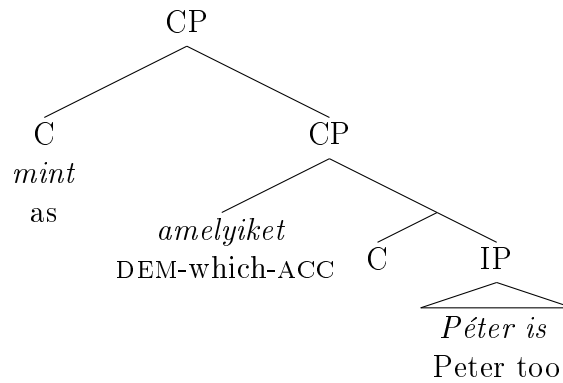

Within the lower CP, the Doubly Filled Comp Filter is operative → *hogy* 'that' is unavailable both in the higher and in the lower C in RCs

(28) az a könyv, (**\*hogy**) **amit** Péter olvas  
 that the book that DEM-what-ACC Peter reads  
 'the book that Peter is reading'

the complementizer *mint* 'as' is available for marking equation/comparison:

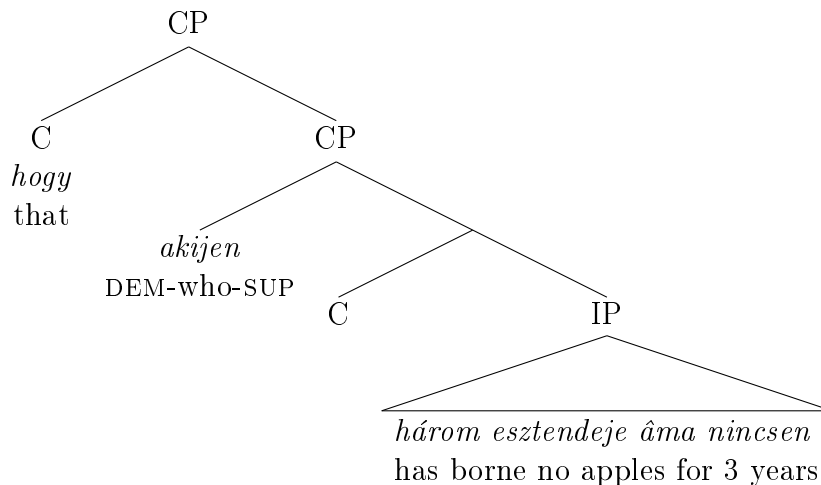

(29) Mari azt a könyvet olvassa, [mint amelyiket Péter is].  
 Mary that-ACC the book-ACC read-3SG as DEM-which-ACC Peter too  
 'Mary is reading the book that Peter does.'

## 4.2. Some 20th century dialectal variation

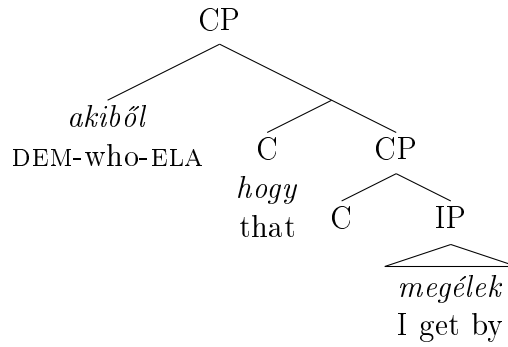

occasionally in the early 20th century, perhaps only dialectally

- (30) annak vóna egy âmafája, [hogy akijen három esztendeje  
 that-DAT have an apple-tree-3SG that DEM-who-SUP three year.since  
 âma nincsen]  
 apple not.be  
 ‘that [man] has an apple tree that has borne no apples for three years’ (? : 48,  
 dialect of Gyergyószentmiklós)

early 20th century, in spoken (perhaps substandard) Hungarian: the operator is in the higher CP layer, the Doubly Filled Comp Filter is not operative

- (31) a. Adott az Isten nekem annyit, [akiből hogy megélek]  
 give-PST.3SG the God me that-much DEM-who-ELA that get.by-1SG  
 ‘God gave me enough to get by on’ (? : 18)  
 b. látom nincs, [aki hogy tegye]  
 see-1SG not-be DEM-who that do-SBJV.3SG  
 ‘I can see that there is nobody to do it’ (? : 18)

## 5. Conclusions

relative cycle in the history of Hungarian relative clauses is attested

general steps of the relative cycle (van ??):

- Step 1: demonstrative/interrogative pronouns → relative pronouns
- Step 2: relative pronouns (dem-REL, wh-REL) → C heads
- Step 3: appearance of new relative operators in the place of original ones (new cycle)

English demonstrates one complete cycle and an incomplete one:

- (I) reanalysis of *that* in OE: Steps 1&2 completed → Step 3 possible
- (II) reanalysis of *wh*-pronouns in ME: Step 1 completed
- (I) precedes (II) → output of (I) provides an environment for (II)
- results: relatives with wh-RELS OR with dem-C (*that*); substandard: wh-REL + C

Hungarian demonstrates two incomplete cycles :

- (II) reanalysis of *wh*-pronouns: Step 1 completed only → Step 3 defective
- (I) reanalysis of *az* 'that.DEM': Step 1 completed only, with fusion
- (II) precedes (I) → output of (II) provides a partial environment for (I) only
- results: relatives with dem-wh-RELS
